

Limb Amputation Service

The physiotherapy team are based in York Hospital, working as part of the specialist Vascular Team and work closely with Occupational Therapists.

They provide pre-operative assessment of those facing prospective major limb amputation, inpatient rehabilitation, management and treatment of all patients following acute amputation, support to colleagues in managing inpatients with a previous amputation, and discharge planning.

Additionally we provide regular outpatient rehabilitation and follow-up treatment to prospective prosthetic limb users, outpatient reviews of previous prosthesis users, and domiciliary visits.
