How does a Treatment Summary benefit me as a patient?

- It includes contact numbers should you wish to speak to someone about your concerns
- It can help you understand more about your treatment and potential late effects
- It can help you feel more confident when talking to your GP about your treatment
- You can use it to share information about your treatment with others, such as carers or to help access travel insurance
- You will feel reassured that you are receiving the same information about your treatment as the healthcare practitioners
