# What is soft tissue sarcoma?

Sarcoma is a type of cancer that develops from cells in the supporting or connective tissue such as muscle, fat, nerves, blood vessels, bone and cartilage.

There are many different types of sarcoma. This leaflet will provide you with information about soft tissue sarcoma.

## Types of soft tissue sarcoma:

There are several types of soft tissue sarcoma which may develop within the skin or in the soft tissues underlying the skin presenting as a physical lump. These include:

- Kaposi Sarcoma
- Pleomorphic Sarcoma
- Leiomyosarcoma
- Liposarcoma
- Angiosarcoma
- Malignant Peripherical Nerve Sheath Tumour (MPNST)

For further information on your specific diagnosis please go to **[www.sarcoma.org.uk](http://www.sarcoma.org.uk)** or ask your consultant or clinical nurse specialist for the relevant information.

# Diagnosing soft tissue sarcoma?

Soft tissue sarcoma is diagnosed using a combination of the following:

- Physical examination of a lump presenting within or under the skin.
- Biopsy – This is when a doctor or surgical nurse removes a small sample of tissue from a suspicious lump or lesion. The sample is then analysed in the laboratory by a pathologist.
- A scan – This is when pictures are taken of the inside of your body. Scans may include Ultra sound, CT, MRI and PET scans.

These diagnostic procedures enable your doctor to obtain as much information, about your diagnosis, as possible. This includes the size and location of the sarcoma and whether it has spread to other parts of your body.

This information helps your doctor to decide on the best treatment plan for you.

Following your sarcoma diagnosis you will be referred to the specialist Sarcoma Multi-Disciplinary Team for treatment recommendations.

# **Treatment for soft tissue sarcoma**

Treatment recommendations will take in to account:

- Your general health
- The site of your sarcoma
- The tumour size
- The grade of your sarcoma

## **Treatment options consist of:**

**Surgery** – This is the most common treatment for soft tissue sarcoma. Surgery may be the only treatment required if the sarcoma is small, accessible and has not spread to other parts of the body.

**Radiotherapy** – This is when high energy rays are used to destroy cancer cells. Radiotherapy may be offered after surgical treatment to reduce the risk of the sarcoma coming back in the same place. Radiotherapy can also be used to treat sarcoma that it is not possible to remove surgically.

**Systemic drug treatments** – Chemotherapy or targeted therapies may be offered to prevent the risk of the sarcoma coming back following surgery or to treat/ manage sarcoma that has already spread to other parts of the body.

# Follow up after treatment for soft tissue sarcoma

As part of your treatment pathway you will be allocated a Sarcoma Clinical Nurse Specialist (CNS). Your CNS will be your key worker for support and information throughout your treatment and follow up period.

After treatment, you will be offered regular follow-up appointments over several years. You will receive a follow-up schedule from your consultant or sarcoma clinical nurse specialist. The follow up reviews may consist of:

- A chance to discuss symptoms.
- An examination to look for any signs of the sarcoma returning. This may include an MRI or ultrasound if required after examination.
- A chest x-ray to rule out any secondary cancers occurring in the lungs.

For more information on any elements of the information contained in this leaflet please visit **[www.sarcoma.org.uk](http://www.sarcoma.org.uk)** or speak to your consultant or clinical nurse specialist.

## **Tell us what you think of this leaflet**

We hope that you found this leaflet helpful. If you would like to tell us what you think, please contact:  
Advanced Macmillan Skin Cancer Nurse Specialist, The York Hospital, Wigginton Road, York, YO31 8HE or telephone 01904 721719.

## **Teaching, training and research**

Our Trust is committed to teaching, training and research to support the development of health and healthcare in our community. Healthcare students may observe consultations for this purpose. You can opt out if you do not want students to observe. We may also ask you if you would like to be involved in our research.

## **Patient Advice and Liaison Service (PALS)**

PALS offers impartial advice and assistance to patients, their relatives, friends and carers. We can listen to feedback (positive or negative), answer questions and help resolve any concerns about Trust services.

PALS can be contacted on 01904 726262, or email [pals@york.nhs.uk](mailto:pals@york.nhs.uk).

An answer phone is available out of hours.
