Your GP has referred you to the One Stop Urology service as you have blood in your urine; either visible or detected on a urine dip stick.

There are many reasons for blood in the urine; infection of the bladder or kidney, stones or less commonly, from the prostate gland in men. For a small group of patients, haematuria can be a first sign of cancer and therefore, it is important to investigate this thoroughly.

For the great majority of patients, no cause is found, but crucially, the tests provide reassurance that no further action is required.

## **What tests and investigations can I expect to have?**

Please come to your appointment with your bladder comfortably full as you will be asked to provide a urine sample. We will test this and you may be offered an antibiotic if we feel you are at risk of infection.

You will require two tests on the day; an ultrasound scan of your kidneys and a camera inspection of your bladder with a telescope

### **Ultrasound scan**

This test makes images of organs and structures inside the body using high-frequency sound waves. You will be lying down for this procedure. A clear, water-based gel is applied to the skin over the abdomen which aids transmission of the sound waves which are picked up by a handheld probe which is moved over the abdomen. You may need to change position so that the technician can look at different areas and you may be asked to hold your breath for short periods during the exam.

The test usually takes less than 30 minutes.

## **Camera inspection (flexible cystoscopy)**

This involves passing a fine flexible telescope a bit like a catheter into the bladder through the urethra (water pipe) under local anaesthetic. The test can feel slightly uncomfortable, but most people are able to tolerate it without any problem.

The test allows the specialist to inspect the inside of your bladder.

The procedure lasts 5-10 minutes and you will be able to drive home or use public transport afterwards. You may wish to bring a friend or relative along with you for support.

This investigation is explained in more detail in an information leaflet which will be provided on the day. You can also find further information at [www.baus.org.uk](http://www.baus.org.uk) in the patients section under "I'm told I need", then "Bladder Procedures", then "Cystoscopy" then "Cystoscopy (flexible)".

## **Further treatment**

Your urologist will discuss your results with you at the end of your appointment. You will either be discharged or offered a further treatment or investigation e.g. CT scan.

You and your GP will receive a letter detailing your consultation and treatment plan.

Please tell the clinic staff if you do **not** wish to have a copy of your clinic letter.

## Tell us what you think of this leaflet

We hope that you found this leaflet helpful. If you would like to tell us what you think, please contact Sarah Hillery, Advanced Nurse Practitioner, General Surgery and Urology, The York Hospital, Wigginton Road, York, YO31 8HE or telephone 01904 72 69 78.

## Teaching, Training, and Research

Our Trust is committed to teaching, training, and research to support the development of health and healthcare in our community. Healthcare students may observe consultations for this purpose. You can opt out if you do not want students to observe. We may also ask you if you would like to be involved in our research.

## Patient Advice and Liaison Service (PALS)

PALS offers impartial advice and assistance to patients, their relatives, friends and carers. We can listen to feedback (positive or negative), answer questions and help resolve any concerns about Trust services. PALS can be contacted on 01904 72 62 62, or email [pals@york.nhs.uk](mailto:pals@york.nhs.uk). An answer phone is available out of hours.

## Leaflets in alternative languages or formats

Please telephone or email if you require this information in a different language or format, for example Braille, large print or audio.
