

Prostate Cancer Follow-up Care for Patients on Androgen Deprivation Therapy

Information for patients, relatives and carers

① For more information, please contact:
Urology Clinical Nurse Specialist Team in
York: 01904 72173

What is follow-up care?

Patients on Androgen Deprivation Therapy will have six monthly follow-up by the urology team.

This will involve regular PSA blood tests, which we will monitor closely. As part of your follow-up, you will be added to our Remote Monitoring System, which helps us keep track of all the regular tests you will require.

Why is follow-up care important?

The aim of follow-up care is to monitor your wellbeing and physical health. Follow-up care is important from a wellbeing perspective.

Cancer support services can help with any physical, emotional, or social problems or challenges you may face in the months or years ahead.

Follow-up care plan

Your follow-up care will include regular PSA blood tests (see glossary) performed every six months.

We will send you letters with dates for scheduled PSA blood tests.

Depending on your clinical requirements you may also need periodic follow-up scans of which you will be advised.

For blood tests, please visit one of your local blood taking services, taking your blood form with you. The attached information explains where you can get your blood test done or you can access the list via this link: <https://www.yorkhospitals.nhs.uk/our-services/a-z-of-services/blood-taking-service-phlebotomy/>

If any abnormalities are identified following your PSA blood test, you will be notified by telephone or a letter and advised of the next steps required.

Monitoring your health

Sometimes cancer can progress. You may be the first to notice something different or unusual between your scheduled follow-up tests.

If you notice any changes in your health, please notify the urology cancer specialist nurse team. They can provide advice regarding these symptoms and whether further investigation is required.

Signs and symptoms to look out for

- **Urinary:** more often/urgent, weak flow, pain/stinging or **blood in urine**
- **Bowel:** diarrhoea or constipation lasting more than a week, urgency, mucus or **rectal bleeding**.
- **Sexual/pelvic:** new erection issues, pelvic ache, or swelling in legs/scrotum/groin
- **Bones/nerves:** persistent bone or back pain, leg numbness/weakness or new fracture

Results

Once you have had your PSA blood test taken, we will write to you within one month to let you know the result and tell you when you should have the next PSA blood test done.

Living With and Beyond Cancer

It is common to experience difficult or challenging emotions, such as stress, depression or anxiety after cancer treatment. Many people find it helpful to talk about their feelings with others such as family and friends, health professionals, or counsellors. Being part of a support group may also help.

However, if you continue to experience depression, anxiety or stress over a prolonged period, please ask your Urology Cancer Nurse Specialist or GP who may be able to refer you for further help and advice.

There is a dedicated Cancer Wellbeing Service in York and Scarborough that provides a wide range of free information and support to patients, their relatives, friends and carers.

Macmillan Cancer Care Centres:

York Hospital, Wigginton Road, York, YO31 8HE,
telephone 01904 721166

Scarborough Hospital, Woodlands Drive, Scarborough,
YO12 6QL, telephone 01723 342606

Finally

Please do not hesitate to contact your urology cancer clinical nurse specialist team, if you are worried about anything related to prostate cancer or are experiencing any of the signs or symptoms mentioned above. We are here to support you and help to ease any worries or concerns.

Our regular hours are:

Monday - Friday 8am - 4 pm

Urology Clinical Nurse Specialist Team in

York: 01904 721735

Email: yhs-tr.cancersupportandinformation@nhs.net

Out of hours please contact 111 or in case of an emergency 999.

Glossary

What is Prostate Specific Antigen (PSA)

A PSA blood test measures the amount of PSA in your blood. PSA is a protein produced by normal cells and prostate cancer cells, you will continue to have regular PSA blood tests, usually every 6 to 12 months.

Tell us what you think of this leaflet

We hope that you found this leaflet helpful. If you would like to tell us what you think, please contact the Lung Cancer Clinical Nurse Specialist Team for your area – see contact details on front page

Teaching, training and research

Our Trust is committed to teaching, training and research to support the development of health and healthcare in our community. Healthcare students may observe consultations for this purpose. You can opt out if you do not want students to observe. We may also ask you if you would like to be involved in our research.

Patient Advice and Liaison Service (PALS)

PALS offers impartial advice and assistance to patients, their relatives, friends and carers. We can listen to feedback (positive or negative), answer questions and help resolve any concerns about Trust services.

PALS can be contacted on 01904 726262, or email yhs-tr.patientexperienceteam@nhs.net.

An answer phone is available out of hours.

Leaflets in alternative languages or formats

If you would like this information in a different format, including braille or easy read, or translated into a different language, please speak to a member of staff in the ward or department providing your care.
